SIVAM ITECH METAL FORMING INDUSTRIES

Corporate Profile &

Manufacturing Capability Document

Chennai, Tamil Nadu, India

1. Introduction

Sivam iTech Metal Forming Industries is a precision-driven automotive manufacturing company specializing in **high-quality sheet metal parts and assemblies**. Established on **5th July 2018** and headquartered in **Chennai, Tamil Nadu**, Sivam iTech has built a strong reputation as a reliable partner to automotive customers by consistently delivering **right quality products, on time, every time**.

The company primarily focuses on the manufacture of **disc brake backing plates for 2W, 3W, and 4W applications**, along with **clutch button backing plates and precision sheet metal components**. Sivam iTech serves **Tier-1 automotive system manufacturers**, supplying components that meet stringent OEM-specific performance, safety, and durability requirements.

Sivam iTech operates as a **one-stop metal forming solution provider**, offering integrated capabilities that include **stamping, in-house tooling development, surface treatment processes such as plating, ED painting, powder coating, and value-added assemblies**. This integrated approach enables tighter process control, improved quality consistency, and faster response to customer requirements.

The organization is **ISO 9001:2015 certified** and has successfully completed **Phase 1 of the IATF 16949 certification process**, with full certification targeted by **December 2025**. Quality systems are deeply embedded across manufacturing operations, supported by structured process controls, inspection systems, and a strong culture of continuous improvement.

With a proven track record of manufacturing **over 25 million safety-critical components**, a sustained **CAGR of approximately 25% over the last five years**, and a financially stable foundation, Sivam iTech continues to invest in advanced manufacturing technologies, capacity expansion, and skill development. Guided by experienced leadership and a committed workforce, the company aims to grow as a **preferred automotive sheet metal and assemblies supplier**, built on trust, technical competence, and long-term customer partnerships.

2. Company Overview

2.1 Company Background

Sivam iTech Metal Forming Industries is an automotive-focused precision manufacturing company established on **5th July 2018** in **Chennai, Tamil Nadu, India**. The company was founded with a clear objective to support the automotive industry with **reliable, high-precision sheet metal components and assemblies**, manufactured through disciplined processes and robust quality systems.

Since its inception, Sivam iTech has steadily expanded its manufacturing capabilities, production volumes, and customer base while maintaining strict adherence to quality and delivery commitments. The company has successfully manufactured and supplied **millions of safety-critical components**, establishing itself as a trusted supplier within the automotive supply chain.

Backed by strong technical leadership and sound financial stability, Sivam iTech continues to invest in infrastructure, tooling, and process automation to meet evolving customer requirements and industry standards.

2.2 Automotive Focus & Customer Segments

Sivam iTech is **exclusively focused on the automotive sector**, supplying precision sheet metal components primarily used in **braking and powertrain-related applications**. The company's core product portfolio includes **disc brake backing plates for two-wheelers, three-wheelers, and passenger vehicles**, along with **clutch button backing plates and related sheet metal assemblies**.

The company serves **Tier-1 automotive system manufacturers**, delivering components designed to comply with **OEM-specific functional, dimensional, and durability requirements**. Sivam iTech's manufacturing processes are aligned with automotive industry expectations for **traceability, process capability, defect prevention, and continuous improvement**, making it a dependable partner for long-term programs.

2.3 Manufacturing Philosophy

Sivam iTech follows a **process-driven manufacturing philosophy** centered on **consistency, prevention, and continuous improvement**. The company operates with a well-planned production layout designed around the **4M framework (Man, Machine, Material, Method)** to ensure stable and repeatable outcomes across all operations.

Key elements of the manufacturing philosophy include:

- Strong emphasis on **in-house tooling design and development** to control product quality from the earliest stages
- Adoption of **lean manufacturing practices** to minimize waste and improve productivity

- Focus on **error-proofing and process standardization** to prevent defects rather than detect them later
- Continuous skill development of operators and engineers through structured training programs

This philosophy enables Sivam iTech to deliver reliable products while remaining flexible and responsive to changing customer demands.

2.4 Commitment to Quality, Cost & Delivery (QCD)

Sivam iTech's operations are governed by a strong commitment to **Quality, Cost, and Delivery (QCD)**, which forms the foundation of all customer engagements.

- **Quality:**
  The company operates an **ISO 9001:2015 certified quality management system** and is progressing toward **IATF 16949 certification**, with Phase 1 successfully completed. Quality is ensured through disciplined process controls, in-process inspections, SPC, MSA, PPAP, and continuous improvement initiatives aimed at achieving **zero-defect performance**.
- **Cost:**
  Cost competitiveness is achieved through **efficient process design, in-house tooling capabilities, productivity improvements, and waste reduction initiatives**. Sivam iTech focuses on long-term cost optimization rather than short-term savings, ensuring sustainable value for customers.
- **Delivery:**
  The company maintains a strong delivery performance by aligning production planning, capacity management, and supply chain coordination. Sivam iTech consistently meets customer delivery schedules through **robust planning systems and disciplined execution**, supporting uninterrupted customer operations.

3. Vision, Mission & Core Values

3.1 Vision

To become a **preferred and trusted supplier of precision sheet metal parts and assemblies** to the automotive industry by delivering consistent quality, reliable performance, and long-term value to customers.

3.2 Mission

- To deliver **right quality products on time, every time**, meeting all customer and regulatory requirements.
- To build **robust manufacturing processes** supported by in-house tooling, disciplined execution, and data-driven controls.
- To continuously invest in **technology, skills, and capacity** to support present and future automotive applications.
- To grow in partnership with customers through **responsiveness, technical competence, and operational reliability**.

3.3 Core Values

- **Trust:**
  We operate with integrity and transparency in all customer, supplier, and employee relationships. Commitments made are commitments delivered.
- **Process Discipline:**
  We believe consistent results come from controlled processes. Standardization, prevention, and continuous improvement guide every operation.
- **People:**
  We value skill, accountability, and teamwork. Continuous training, safety, and employee involvement are central to sustainable performance and growth.

4. Organizational Structure

Sivam iTech Metal Forming Industries operates with a **lean and functional organizational structure** designed to ensure **clear accountability, fast decision-making, and strong process ownership**. The structure supports operational efficiency while maintaining strict control over quality, delivery, and compliance requirements expected by the automotive industry.

4.1 Promoters & Leadership

The company is led by promoters with **extensive experience in automotive manufacturing, operations, supply chain management, and finance**. Leadership provides strategic direction, customer engagement, investment planning, and governance oversight, ensuring long-term sustainability and compliance with industry standards.

- **Managing / Executive Leadership**
  Responsible for business strategy, customer relationships, capacity planning, and overall organizational performance.

4.2 Operations

The **Operations function** is responsible for end-to-end manufacturing execution and delivery performance.

Key responsibilities include:

- Production planning and control
- Stamping operations and secondary processes
- Surface treatment coordination (plating, ED painting, powder coating)
- Maintenance of machines and utilities
- Productivity improvement and waste reduction initiatives

Operations are managed through defined processes aligned to **4M principles (Man, Machine, Material, Method)** to ensure stable and repeatable production outcomes.

4.3 Quality

The **Quality function** operates independently to ensure compliance with customer, statutory, and certification requirements.

Key responsibilities include:

- Quality Management System (ISO 9001:2015 and IATF 16949 roadmap)
- Incoming, in-process, and final inspection controls
- SPC, MSA, PPAP, APQP, and process audits
- Customer complaint handling and corrective actions

- Continuous improvement and zero-defect initiatives

Quality is embedded across operations with a strong focus on **defect prevention rather than detection**.

4.4 Tooling & New Product Development (NPD)

The **Tooling & NPD function** plays a critical role in controlling product quality from the initial development stage.

Key responsibilities include:

- In-house tool design and development
- Progressive, compound, and single-stage die development
- Prototype and pilot validation
- Tool maintenance and continuous improvement
- Support for new part introduction and process optimization

This function enables **faster development cycles, improved manufacturability, and reduced dependency on external vendors**.

4.5 Finance & Administration

The **Finance & Administration function** ensures financial discipline, statutory compliance, and organizational support.

Key responsibilities include:

- Financial planning, cost control, and investment evaluation
- Accounting, taxation, and statutory compliance
- Vendor payments and receivables management
- Human resources, administration, and facility management

Strong financial governance supports **sustainable growth and timely capital investments** aligned with business needs.

5. Manufacturing Infrastructure

Sivam iTech Metal Forming Industries has established a **robust and scalable manufacturing infrastructure** designed to meet the demanding requirements of automotive customers. The facility is planned to ensure **process stability, quality consistency, and production flexibility**, supported by disciplined layouts and in-house technical capabilities.

5.1 Stamping Facility

Sivam iTech operates a **comprehensive stamping facility** equipped with **more than 25 stamping presses** ranging from **50 tons to 200 tons**, consisting of a mix of **imported and domestic machines**. This range enables the company to manufacture a wide variety of precision sheet metal components for automotive applications.

Key features of the stamping facility include:

- Press capacity coverage suitable for **2W, 3W, and 4W automotive components**
- Well-planned production layout designed around **4M principles (Man, Machine, Material, Method)**
- Supporting equipment for flatness control, deburring, and surface finishing
- Utilities including **82.5 KVA genset, screw compressor with air dryer**, and auxiliary systems ensuring uninterrupted operations

The stamping operations are managed through controlled processes to ensure **dimensional accuracy, repeatability, and high productivity**.

5.2 Tool Room & New Product Development (NPD)

Sivam iTech maintains a **dedicated in-house tool room** that plays a critical role in ensuring product quality and development agility. The company has strong technical expertise in **tool design, development, and maintenance**, enabling tighter control over critical product characteristics.

Capabilities include:

- In-house design and development of **progressive, compound, and single-stage dies**
- Prototype and pilot part validation for new product introduction
- Continuous tool improvement and preventive maintenance
- Faster response time for design changes and engineering modifications

This in-house tooling capability supports a **quick and reliable development cycle**, reducing lead times and improving manufacturability for customer programs.

5.3 Surface Treatment Facilities

To provide value-added and integrated solutions, Sivam iTech has established surface treatment capabilities aligned with customer requirements.

- **Copper Plating:**
  Manual copper plating lines with controlled process parameters to ensure consistent coating quality and adherence to specifications.
- **ED Painting:**
  Experience in ED painting processes with the capability to **expand capacity based on customer demand**, supporting corrosion protection and functional requirements.
- **Powder Coating:**
  In-house powder coating facility equipped with spray booths and guns, using **reputed coating materials** to achieve uniform thickness, durability, and aesthetic finish.

These facilities enable Sivam iTech to deliver **ready-to-use components** while maintaining control over quality and turnaround time.

5.4 Wire Forming Facility

Sivam iTech operates a **wire forming facility** dedicated to the manufacture of **handles used in plastic buckets, drums, and paint containers**.

Key highlights include:

- Dedicated wire forming machines for consistent shape and strength
- **Production capacity of approximately 4 lakh pieces per month**
- Stable processes ensuring dimensional accuracy and repeatability

This capability adds to the company's diversified manufacturing portfolio and supports customer requirements beyond stamping operations.

6. Production Capacity & Performance

Sivam iTech Metal Forming Industries has established **scalable production capacity** supported by stable processes, disciplined planning, and continuous performance monitoring. Capacity planning and execution are aligned with customer demand forecasts and long-term program requirements.

6.1 Disc Brake Backing Plates – Stamping Capacity

Sivam iTech's core manufacturing strength lies in the production of **disc brake backing plates for automotive applications**.

- **Current production capacity:**
  Approximately **1.0 million parts per month**
- **Full installed capacity:**
  Up to **1.4 million parts per month**

This capacity supports requirements for **two-wheelers, three-wheelers, and passenger vehicles**, with flexibility to scale output through optimized shift planning and tooling availability.

6.2 Plating & Surface Treatment Capacity

The company maintains dedicated surface treatment facilities to support value-added processing and integrated supply.

- **Copper plating – current capacity:**
  Approximately **50,000 parts per month**
- **Copper plating – full capacity:**
  Up to **200,000 parts per month**

ED painting and powder coating capacities are **expandable based on customer program requirements**, ensuring flexibility for future volume growth and new product introductions.

6.3 Growth Performance

Sivam iTech has demonstrated **consistent business growth** since inception, supported by capacity expansion, customer confidence, and operational reliability.

- Maintained an average **Compound Annual Growth Rate (CAGR) of approximately 25%** over the last five years
- Continuous increase in part volumes and program launches across automotive customers
- Stable financial performance enabling reinvestment in machinery, tooling, and process improvements

This growth reflects the company's ability to scale operations while maintaining quality and delivery performance.

6.4 Quality Performance – Zero PPM Achievement

Quality performance is tracked and reviewed through structured metrics and customer feedback systems.

- **Zero PPM performance** has been consistently achieved and sustained on selected high-volume customer programs
- Defect prevention is driven through **SPC, error-proofing, in-process controls, and corrective action systems**
- Customer quality performance is monitored through periodic audits and scorecards

Sivam iTech's focus remains on **sustaining zero-defect performance** rather than short-term metrics, ensuring long-term customer confidence.

7. Product Portfolio

Sivam iTech Metal Forming Industries offers a focused portfolio of **precision sheet metal components and assemblies** developed specifically for automotive and allied industrial applications. All products are manufactured through controlled processes to meet customer-specific functional, dimensional, and quality requirements.

7.1 Disc Brake Backing Plates

Disc brake backing plates form the **core product segment** of Sivam iTech's manufacturing portfolio.

- Applications across **two-wheelers (2W), three-wheelers (3W), and passenger vehicles (4W)**
- Designed to meet **OEM and Tier-1 brake system performance requirements**
- Manufactured using high-precision stamping processes with consistent dimensional control
- Supplied in raw, plated, ED painted, or powder-coated condition based on customer specifications

These components are produced in **high volumes** and are classified as **safety-critical parts**, requiring stringent quality and process control.

7.2 Clutch Button Backing Plates

Sivam iTech manufactures **clutch button backing plates** for automotive applications requiring high dimensional accuracy and durability.

- Suitable for passenger vehicle and light automotive applications
- Controlled stamping and finishing processes ensure repeatability
- Manufactured to customer-defined drawings and functional requirements

This product line supports customers seeking **reliable long-term supply** for critical driveline components.

7.3 Wire Forms

The company produces **precision wire-formed components**, primarily used in non-automotive and allied applications.

- Handles for **plastic buckets, drums, and paint containers**
- Manufactured using dedicated wire forming machines
- Stable production capability with consistent shape and strength control

This segment complements the company's stamping operations and expands its manufacturing versatility.

7.4 Sheet Metal Assemblies

Sivam iTech supplies **sheet metal sub-assemblies** developed through a combination of stamping and value-added processes.

- Assemblies tailored to customer-specific designs
- Integration of stamping, surface treatment, and assembly operations
- Focus on dimensional accuracy, functional fit, and process reliability

These assemblies help customers reduce supply chain complexity by sourcing **ready-to-use components** from a single supplier.

8. Quality Systems & Compliance

Quality at Sivam iTech Metal Forming Industries is built into every stage of the manufacturing process through **structured systems, disciplined execution, and continuous improvement practices**. The company's quality framework is aligned with automotive industry expectations for **process control, defect prevention, and traceability**.

8.1 Quality Management Systems

Sivam iTech operates an **ISO 9001:2015 certified Quality Management System**, ensuring standardized processes, consistent documentation, and effective control across operations.

In alignment with automotive customer requirements, the company is progressing toward **IATF 16949 certification**:

- **Phase 1 audit successfully completed**
- **Full certification targeted by December 2025**

The transition roadmap includes system upgrades, process audits, and competency development to ensure full compliance with IATF requirements.

8.2 Advanced Quality Planning & Process Controls

Automotive quality tools are systematically implemented across programs to ensure **robust process capability and risk mitigation**.

Key systems in use include:

- **APQP (Advanced Product Quality Planning)** for structured new product introduction
- **PPAP (Production Part Approval Process)** to validate product and process readiness
- **SPC (Statistical Process Control)** for monitoring critical characteristics
- **MSA (Measurement System Analysis)** to ensure accuracy and reliability of inspection systems

These tools enable early identification of risks and sustained process stability during mass production.

8.3 Inspection & Testing Facilities

Sivam iTech maintains appropriate inspection and testing facilities to verify product conformance at various stages of manufacturing.

Inspection equipment includes:

- Profile projector
- Surface roughness tester
- Height gauges and dimensional inspection tools
- In-process and final inspection gauges as per product requirements

Inspection activities are integrated with production processes to ensure **real-time quality monitoring**.

8.4 Error-Proofing & Traceability

Defect prevention is a core focus of Sivam iTech's quality strategy.

- **Error-proofing (Poka-Yoke) mechanisms** are implemented at critical process stages
- Defined process controls ensure adherence to approved manufacturing parameters
- **Traceability systems** are maintained to track material, process, and inspection status as required by customer programs
- Root cause analysis and corrective action systems are used to prevent recurrence of issues

These practices support the company's objective of **zero-defect performance** and sustained customer confidence.

9. Customers & Partnerships

Sivam iTech Metal Forming Industries maintains **long-term supply relationships with established automotive and engineering companies**, built on consistent quality performance, delivery reliability, and technical collaboration.

The company currently supplies precision sheet metal components and assemblies to the following customers:

- **Rane Brake Lining Limited**
  Supply of disc brake backing plates for automotive braking applications, supporting high-volume and safety-critical programs with sustained quality performance.
- **JCBL Group**
  Supply of sheet metal components for heavy vehicle and engineering applications, meeting customer-specific technical and delivery requirements.
- **KB Autosys**
  Supply of precision sheet metal parts aligned with automotive system-level requirements.
- **Ashwin Cold Forge**
  Supply of supporting sheet metal components for forged and assembled automotive parts.

These partnerships are characterized by:

- Consistent adherence to **quality and delivery commitments**
- Program-based supply with defined technical and commercial requirements
- Ongoing engagement for process improvement and capacity alignment

Sivam iTech approaches customer relationships as **long-term partnerships**, focused on reliability, transparency, and continuous performance improvement rather than transactional supply.

10. People, Safety & Culture

Sivam iTech Metal Forming Industries considers its people to be a **critical enabler of quality, productivity, and customer satisfaction**. The organization focuses on building a skilled, disciplined, and safety-conscious workforce capable of meeting the demanding requirements of the automotive industry.

10.1 Skilled Workforce

Sivam iTech employs a **trained and experienced workforce** across manufacturing, quality, tooling, and support functions. Operators and technicians are closely involved in day-to-day process execution and are encouraged to take ownership of product quality and process stability.

The company emphasizes **multi-skilling and accountability**, enabling operational flexibility and consistent performance across shifts and programs.

10.2 Lean Practices: 5S, Kaizen & CLIT

Lean manufacturing principles are embedded across the organization to support continuous improvement.

- **5S** practices are implemented to maintain workplace organization, safety, and efficiency
- **Kaizen** initiatives encourage employees to identify and implement incremental improvements
- **CLIT (Clean, Lubricate, Inspect, Tighten)** practices are followed to maintain machine health and process stability

These practices contribute to reduced downtime, improved productivity, and safer working conditions.

10.3 Continuous Training & Skill Development

Sivam iTech invests in **ongoing training programs** to strengthen technical skills, quality awareness, and safety compliance.

Training areas include:

- Process and quality control
- Self-inspection and defect prevention
- Safety practices and hazard awareness
- Lean manufacturing concepts

Employees are encouraged to participate in **joint problem-solving and brainstorming sessions**, fostering collaboration between operators, engineers, and supervisors.

10.4 Safety-First Culture

Workplace safety is treated as a **non-negotiable priority** at Sivam iTech.

- Safe work procedures are defined and enforced
- Regular safety training and awareness programs are conducted
- Equipment and layouts are designed to minimize operational risks
- Employees are empowered to report unsafe conditions and stop work when required

The company strives to provide a **safe, healthy, and respectful working environment**, supporting both employee well-being and sustainable operational performance.

11. Growth, Expansion & Future Roadmap

Sivam iTech Metal Forming Industries has defined a **clear and structured growth roadmap** aligned with evolving automotive regulations, customer demand, and long-term capability development.

11.1 Capacity Expansion

To support increasing customer volumes and new program launches, Sivam iTech is planning the installation of **two additional 250-ton stamping presses with coil feeder systems**, scheduled for **January 2026**.
This expansion will enhance production flexibility, support higher tonnage requirements, and strengthen the company's ability to cater to advanced automotive applications.

11.2 ABS Regulation–Driven Growth

The implementation of **mandatory ABS regulations in two-wheelers** is expected to drive increased demand for disc brake components. Sivam iTech has aligned its capacity planning and tooling strategy to support this regulatory-driven growth, ensuring readiness to meet higher volume and quality expectations from brake system manufacturers.

11.3 Diversification into Plastic Manufacturing

As part of its long-term strategy, Sivam iTech is expanding into **plastic injection molding and plastic blow molding** to complement its existing sheet metal capabilities.
This diversification will enable the company to offer **integrated metal and plastic component solutions** for automotive applications, reducing supply chain complexity for customers.

11.4 Vision Toward 2030

By 2030, Sivam iTech aims to establish itself as a **preferred supplier of precision sheet metal and plastic components** to the automotive industry. The focus will remain on:

- Sustainable capacity growth
- Advanced manufacturing technologies
- Strong quality and delivery performance
- Long-term customer partnerships

Growth will be pursued with **financial discipline, operational stability, and process-driven execution**.

12. Promoters' Profile

Sivam iTech Metal Forming Industries is led by promoters with **deep domain expertise in automotive manufacturing, operations, and financial governance**, providing the organization with strong strategic direction and operational stability.

Mr. K. Vijaya Kumar – Operations & Strategy

Mr. K. Vijaya Kumar brings **over two decades of leadership experience** in automotive manufacturing, operations, and supply chain management. He has held key responsibilities across **production, vendor development, sourcing, and operational excellence** in leading automotive organizations.

He holds a **B.Tech in Chemical Technology** and has completed a **full-time business management program from the Indian Institute of Management, Calcutta**. His experience includes managing high-value sourcing programs, developing robust supplier quality systems, and driving process improvements aligned with automotive industry best practices.

Mr. Vijaya Kumar has also received **direct training from Japanese experts Prof. Shiji Shiba and Prof. Takeyuki Furuhashi**, specializing in **Value Stream Mapping (VSM) and lean transformation methodologies**. His international exposure across **Japan, China, the USA, and Europe** supports the adoption of globally benchmarked manufacturing and quality practices at Sivam iTech.

He is responsible for **overall operations strategy, manufacturing performance, customer engagement, and long-term capability development**.

Mr. K. Ravi Kumar – Finance & Governance

Mr. K. Ravi Kumar is a **Chartered Accountant with over 20 years of professional experience** in finance, accounting, and corporate governance. He has worked with multinational organizations including **Ford and Michelin Tyres**, handling roles related to financial control, taxation, and strategic finance.

His experience includes leading **international assignments, greenfield project finance, statutory compliance, and CFO-level responsibilities**. He brings strong expertise in **financial planning, risk management, and governance systems**, supporting sustainable growth and disciplined capital investment.

Mr. Ravi Kumar has international exposure across the **USA and Europe**, contributing to robust financial practices aligned with global standards. At Sivam iTech, he oversees **financial management, compliance, governance, and long-term financial strategy**.

13. Contact & Location

Sivam iTech Metal Forming Industries operates from Chennai, Tamil Nadu, with centralized manufacturing and administrative functions to support customers efficiently.

Registered & Manufacturing Address

Sivam iTech Metal Forming Industries
No. 115 / 2A, Mahalakshmi Nagar Extension,
Noombal, Chennai – 600 077,
Tamil Nadu, India.
